

HIAWATHA'S WATER SYSTEM & WELLS UPGRADE PROJECT

Important Community Update - Water Treatment System and Wells Upgrade Project

Project Update: Water Treatment Plant & Main Water Distribution Line

Homes & Facilities along the following roads who expressed an interest in participating in the above project, will be connected to a main water line, piped distribution system:

- Hiawatha Line
- Paudash Street East, out to Lakeshore
- Paudash Street up to Sopers Lane.

In order to move forward with this work, two separate due diligence investigations will be taking place beginning the week of June 22, 2020: a topographic survey and a geotechnical investigation.

Topographic Survey:

A topographic survey will be conducted along the aforementioned roads:

The work will be primarily conducted in the road, on road shoulders and within roadside ditches. Surveyors will require access to the properties of homeowners who will be connected to the distribution line. Surveyors will need to:

- Mark edges of driveways
- Drinking water well locations
- House corners

All contractors entering the Community have been asked to provide a plan in which they outline the health and safety and social distancing measures they are undertaking.

Geotechnical Investigation:

A geotechnical survey will also be conducted along the aforementioned roads: During this time citizens may see reduced lanes along arterial roads in the Community and pylons demarcating work areas where contractors will be. Design Consultant (Arcadis) proposes to drill boreholes at approximately 150 m (500 foot) intervals along the proposed roads beneath which the new water main will be installed. A total of 27 boreholes will be installed. The drilling work is anticipated to occur over the course of a week. Outside contractors will be entering the Community the following week to conduct groundwater tests in monitoring wells installed during the investigation.

We thank everyone in advance for their time and patience while the Community conducts these works to inform the design of the future watermain.
